SUMMARY

Full Stack Developer with 3+ years of experience building and owning data-intensive web applications end to end. Sole developer responsible for a satellite-network monitoring platform tracking 100K+ provisioned devices (64K+ active links) across GEO VSAT, LEO, and SD-WAN for 241 enterprise clients in banking, telecom, defense, and IT. Strong in React, NestJS, and TypeScript, with hands-on experience in time-series telemetry (TimescaleDB), real-time NOC dashboards, third-party API integrations, RBAC, and legacy migration.

SKILLS

Frontend: React, TypeScript, JavaScript, Vite, Material UI, data visualization (charts, maps), responsive ERP-style UIs

Backend: Node.js, NestJS, REST APIs, cron-based automation, role-based access control

Data: MongoDB, TimescaleDB (PostgreSQL), time-series querying, CSV report generation

Tooling: Docker (containerized MongoDB/TimescaleDB), Git, GitLab (3+ yrs), Jest, production debugging, Figma-to-UI

EXPERIENCE

KSDAC LLP — Full Stack Developer (Remote)

04/2023 – Present

- Sole owner of frontend and backend for a network-monitoring platform tracking **100K+ provisioned devices (64K+ currently active links)** — GEO VSAT, LEO terminals, and hybrid SD-WAN (VSAT+4G) — for a satellite-communications client serving **241 enterprise customers** in banking, telecom, defense, and IT.
- Built the platform's real-time NOC dashboard: online/offline trends, portfolio availability (99.97%), offline-device categorization by ticket status and outage age, and state-wise site availability across India.
- Designed a **dual-database architecture**: MongoDB (~15 collections) for device, customer, sub-customer, and satellite metadata; TimescaleDB (PostgreSQL) for high-frequency telemetry such as live bandwidth and RF signal readings.
- Built an automated integration with the client's third-party service providers, syncing device-disconnection data via API every 30 minutes — replacing manual coordination across field engineers, billing, and support, and **cutting customer disconnection turnaround from weeks to under a day** while eliminating recurring data-mismatch errors.
- Built per-device monitoring views: RF signal strength vs. threshold charts (Rx/Tx), daily/monthly availability drilldowns, uptime tracking, and live weather at device location via OpenWeatherMap API.
- Implemented **LEO device path tracking** on interactive Leaflet/OpenStreetMap maps, plotting movable-terminal routes with waypoints and direction over user-selected time ranges.
- Designed and implemented **7-role RBAC** (Super Admin, NOC Supervisor, NOC Engineer, NOC Administrator, Customer Support, Customer, Sub-customer) with hierarchical data isolation between customers and sub-customers.
- Built a multi-filter report engine (device type, customer, sub-customer, state, status, custom date ranges) generating downloadable CSV reports such as monthly bandwidth utilization, plus scheduled cron-based report generation.
- Migrated the legacy REST API codebase to **NestJS with TypeScript** in a monorepo, cutting recurring production type errors and improving maintainability.
- Containerized local and staging database environments (MongoDB, TimescaleDB) with Docker; acted as first responder for production data issues affecting enterprise clients.

Prospectss — JavaScript Developer (Remote)

09/2022 – 12/2022

- Developed browser extensions for a paid SaaS platform, handling dynamic content and site-specific rendering constraints.
- Built and maintained a credit-based metering system where each user operation consumed billed credits.
- Improved error handling and reliability of production extensions used by paying customers.

Crossscope — Frontend Developer Intern (Remote)

01/2022 – 04/2022

- Built core UI modules (dashboard, authentication, account management) for an AI-driven cancer-treatment healthcare platform using React, Material UI, Formik, and Axios.
- Integrated frontend with backend REST APIs, with form validation and API error handling appropriate to a regulated healthcare environment.

EDUCATION

B.Tech, Computer Science & Engineering — Uttarakhand University, Dehradun

Graduated 04/2022 • CGPA: 8.4/10
